nielless-acharya

English (Fluent)

Technical Stack

Core Backend

Node.js, TypeScript, Python, Express, PostgreSQL, DynamoDB

Frontend Engineering

Next.js, React, Redux Toolkit, Tailwind CSS

DevOps & Cloud

AWS (Lambda, EC2, RDS), GCP, Docker, GitHub Actions, DataDog

AI Tools

Agentic Tools & Workflows

Cursor, GitHub Copilot, Perplexity

LLMs & Inference Engines

Claude Sonnet 4.6, GPT-5.2, Gemini 3 Pro, Groq, LangChain (familiar)

Professional Summary

AI-Accelerated Full-Stack Engineer with **4 YOE**. Backend-first, specializing in building reliable AI agent systems and backend infrastructure at the orchestration layer from multi-agent fan-out patterns to low-latency LLM inference pipelines.

Operates with high autonomy to take true end-to-end ownership — from schema design to deployment — shipping reliable, TypeScript-first systems that hold up under production load in distributed environments.

Education

2018 – 2022

BITS Pilani Hyderabad Campus, India

CGPA: 7.44/10

B.E. Computer Science

Full-time On-Campus Program

Professional Experience

Jul 2022 – Present

Full Stack Software Engineer

Publicis Sapient

Core Products: UnitedHealthCare + WCI (Carbon Trading)

- **Greenfield Development & AI Workflows (UHC):** Developed the UnitedHealthCare e-commerce store from the ground up (Next.js/Redux), serving **100K+ monthly sessions**. Leveraged **GitHub Copilot** to accelerate feature development, currently architecting the core Admin Portal and complex LSA/HSA payment integrations.
- **CI/CD & Infrastructure (UHC):** Engineered the **canary deployment pipeline**, enabling gradual production rollouts and reducing critical release risks by 40%.
- **Legacy Migration & DB Design (WCI):** Drove the modernization of business-critical microservices, operating with high autonomy. Re-architected the data flow from **Python/DynamoDB** to **Node.js/PostgreSQL**, writing transformation scripts that ensured 100% data consistency during a zero-downtime cutover.
- **Regulated Systems (WCI):** Developed core allocation APIs for the Carbon Emissions Cap-and-Trade system, programmatically enforcing a 10% annual reduction in corporate carbon caps.

Feb 2022 – Jun 2022

Software Engineer Intern

PayPal India

Rapid Emerging Markets Team

- Built the **Interoperability Dashboard** using **Node.js, REST APIs** and **React**, enabling real-time visualization of merchant transaction failures for Product Managers.

Key Projects

Live Project

Repwise | AI-Accelerated Architecture

GitHub | Live

- Architected and shipped a full-stack PWA workout tracker, utilizing **Perplexity AI** for system design and automating 80% of PR generation to drastically reduce time-to-market.
- Designed a **unified TypeScript architecture** sharing types across the Supabase database and Next.js UI, demonstrating autonomous end-to-end ownership.
- *Tech: Next.js, TypeScript, Supabase, Tailwind CSS, Vercel CI/CD.*

Mobile App

Orion | Voice-Native AI Assistant

Backend | Mobile

- Architected an end-to-end voice-first AI assistant, engineering the **full agent orchestration layer** handling real-time **LLM inference**, **voice transcription pipeline**, and **low-latency response** coordination under concurrent load.
- *Tech: React Native, Node.js, PostgreSQL, Groq (Llama3/Whisper)*

Live Project

Agentic Systems | Multi-Agent Orchestration

GitHub | Live

- Architected a multi-agent Node.js system with **handoff style** and **parallel fan-out/fan-in patterns** (Promise.all) for concurrent agent task execution and response aggregation
- *Tech: Node.js, TypeScript, Groq, multi-agent orchestration*

Certifications

2022

AWS Certified Cloud Practitioner

VFDHBE51S24QQKC7

2023

GCP Certified Cloud Digital Leader
