- English (Fluent)

Technical Stack

Core Backend

Node.js, TypeScript, Express, PostgreSQL, SQLite, Drizzle ORM, Python

Frontend Engineering

Next.js, React, Redux Toolkit, Tailwind CSS

System Design

Microservices Patterns, Event-Driven Architecture, REST API Design, Database Normalization

DevOps & Cloud

AWS (Lambda, EC2, RDS, Cloudwatch), Jest, Docker, CI/CD (GitHub Actions, Jenkins), Datadog

Professional Summary

Software Engineer focused on architecting TypeScript-first systems and decoupled product architectures. Experienced in zero-downtime legacy migrations (Python to Node.js), complex domain modeling, and enforcing strong type guarantees from the database to the UI to prevent state inconsistency.

Proven track record of delivering regulated, high-performance platforms serving **100K+ monthly sessions**. Operates with a strict bias toward simplicity, clean abstraction boundaries, and maintaining complete end-to-end ownership of the development lifecycle.

Education

2018 – 2022 **BITS Pilani Hyderabad Campus, India** CGPA: 7.44/10
B.E. Computer Science
Full-time On-Campus Program

Professional Experience

- Jul 2022 – Present **Full Stack Software Engineer** Publicis Sapient
Core Clients: UnitedHealthCare + WCI (Carbon Trading)
- Greenfield Development (UHC):** Developed the UnitedHealthCare e-commerce store from the ground up (Next.js/Redux), serving **100K+ monthly sessions**. Currently architecting the core Admin Portal and complex LSA/HSA payment integrations.
 - Legacy Migration & DB Design (WCI):** Drove the modernization of business-critical microservices, operating with high autonomy. Re-architected the data flow from **Python/DynamoDB** to **Node.js/PostgreSQL**, writing transformation scripts that ensured 100% data consistency during a zero-downtime cutover.
 - Regulated Systems (WCI):** Developed core allocation APIs for the Carbon Emissions Cap-and-Trade system, programmatically enforcing a 10% annual reduction in corporate carbon caps. Implemented complex regulatory logic using **Node.js** and **PostgreSQL** transactions to ensure strict audit compliance.
 - CI/CD & Infrastructure (UHC):** Engineered the **canary deployment pipeline**, enabling gradual production rollouts and reducing critical release risks by 40%.

- Feb 2022 – Jun 2022 **Software Engineer Intern** PayPal India
Rapid Emerging Markets Team
- Built the **Interoperability Dashboard**, a tool allowing Product Managers to visualize merchant transaction failures in real-time.
 - Developed REST APIs using Node.js and interactive visualizations using React, reducing time-to-debug for payment failures.

Key Projects

- Live Project **Repwise | Unified TypeScript Architecture** [GitHub](#) | [Live](#)
- Built a **full-stack workout tracker** utilizing **agentic AI workflows** for architectural planning and **automated PR generation**.
 - Designed a **unified TypeScript architecture** sharing types across the Supabase database and Next.js UI, managing the full SDLC and zero-downtime schema evolution.
 - Tech: Next.js, TypeScript, Supabase, Tailwind CSS.*
- Mobile App **Gita Reader | Offline-First Mobile Architecture** [GitHub](#)
- Architected a completely offline React Native application, designing a decoupled, two-table **SQLite** schema managed via **Drizzle ORM** to handle complex translation relationships.
 - Engineered a custom data pipeline utilizing **Python** and **OCR** to extract, sanitize, and patch translations from legacy PDFs directly into the local database, ensuring zero network dependency.
 - Implemented high-performance native UI features, including custom **PanResponder** swipe gestures, sticky UI states, and dynamic gradient masking.

Certifications

2025 AWS Certified Cloud Practitioner (Renewed) [VFDHBE51S24QKQC7](#)

2023 GCP Certified Cloud Digital Leader [5a57c6ef6a6e4d9695721b1674a3260a](#)
