Technical Stack

Core Backend

Node.js, TypeScript, Express, PostgreSQL, SQLite, Drizzle ORM, DynamoDB, Python

Frontend Engineering

Next.js 14, React 18, Redux Toolkit, Tailwind CSS

System Design

Microservices Patterns, Event-Driven Architecture, REST API Design, Database Normalization

DevOps & Cloud

AWS (Lambda, EC2, RDS, Cloudwatch), Docker, CI/CD (GitHub Actions, Jenkins), Datadog

Professional Summary

Software Engineer with **4 YOE** specializing in high-performance backend modernization and distributed systems. Expert in migrating legacy Python/NoSQL architectures to strictly typed Node.js/PostgreSQL microservices to improve throughput and data integrity.

Proven track record of delivering zero-downtime deployments and enforcing strict regulatory logic via APIs. Operates with high autonomy to solve deep data challenges, architect data pipelines, and scale platforms serving **100K+ monthly sessions** in distributed environments.

Education

2018 – 2022 **BITS Pilani Hyderabad Campus**
B.E. Computer Science
Full-time On-Campus Program

CGPA: 7.44/10

Professional Experience

Jul 2022 – Present

Software Engineer

Publicis Sapient

Core Products: WCI (Carbon Trading) + UnitedHealthCare

- Legacy Migration & DB Design (WCI):** Drove the modernization of business-critical microservices, operating with high autonomy. Re-architected the data flow from **Python/DynamoDB** to **Node.js/PostgreSQL**, writing transformation scripts that ensured 100% data consistency during a zero-downtime cutover.
- Regulated Systems (WCI):** Developed core allocation APIs for the Carbon Emissions Cap-and-Trade system, programmatically enforcing a 10% annual reduction in corporate carbon caps. Implemented complex regulatory logic using **Node.js** and **PostgreSQL** transactions to ensure strict audit compliance.
- CI/CD & Infrastructure (UHC):** Engineered the **canary deployment pipeline**, enabling gradual production rollouts and reducing critical release risks by 40%.
- Greenfield Development (UHC):** Developed the UnitedHealthCare e-commerce store (Next.js/Redux), serving **100K+ monthly sessions**. Currently architecting the core Admin Portal and complex LSA/HSA payment integrations.

Feb 2022 – Jun 2022

Software Engineer Intern

PayPal India

Rapid Emerging Markets Team

- Built the **Interoperability Dashboard**, a tool allowing Product Managers to visualize merchant transaction failures in real-time.
- Developed REST APIs using Node.js and interactive visualizations using React, reducing time-to-debug for payment failures.

Key Projects

Live Project

Repwise | Unified TypeScript Architecture

GitHub | Live

- Built a **full-stack workout tracker** utilizing **agentic AI workflows** for architectural planning and **automated PR generation**.
- Designed a **unified TypeScript architecture** sharing types across the Supabase database and Next.js UI, managing the full SDLC and zero-downtime schema evolution.
- Tech: Next.js, TypeScript, Supabase (PostgreSQL), Tailwind CSS.*

Mobile App

Gita Reader | Local Database & Data Pipeline

GitHub

- Architected a decoupled, two-table **SQLite** database schema managed via **Drizzle ORM** to handle heavy text payloads and complex translation relationships on-device.
- Engineered a custom data pipeline utilizing **Python** and **OCR** to extract, sanitize, and patch legacy PDF translations directly into the local database.
- Implemented on-device **FTS5 full-text search** to ensure zero-latency queries across 700+ records without network dependency.

Certifications

2022

AWS Certified Cloud Practitioner

VFDHBE51S24QQK7

2023

GCP Certified Cloud Digital Leader
