Technical Stack

Backend & APIs

Node.js, TypeScript, Express, REST,
Python, PostgreSQL, DynamoDB

Frontend

React, Next.js, Redux, Tailwind CSS,
performance optimization

Databases & DevOps

Docker/containerization, AWS/GCP,
CI/CD pipelines, GitHub Actions.
DataDog

LLMs & Inference Engines

Claude 4.5 Sonnet, GPT-5.2,
Gemini 3 Pro, Groq

Testing

Jest, unit/integration/E2E tests

Professional Summary

Software Engineer specializing in performance optimization, scalable architectures, and platform reliability. Proven track record of delivering end-to-end systems handling **100K+ monthly sessions** with optimized Core Web Vitals and stringent test coverage.

Expert in executing zero-downtime database migrations, architecting robust **CI/CD pipelines**, and maintaining strict abstraction boundaries to ensure maximum uptime and data integrity in high-traffic distributed environments.

Education

2018 – 2022 **BITS Pilani Hyderabad Campus, India** CGPA: 7.44/10
B.E. Computer Science
Full-time On-Campus Program

Professional Experience

Jul 2022 – Present **Software Engineer** Publicis Sapient
Core Clients: UnitedHealthCare + WCI (Carbon Trading)

- Performance & Scale (UHC):** Developed the UnitedHealthCare e-commerce platform (Next.js/Redux), serving **100K+ monthly sessions**. Optimized Core Web Vitals and maintained **95%+ unit test coverage** to ensure high reliability under production load.
- CI/CD & Infrastructure (UHC):** Engineered the **canary deployment pipeline**, enabling gradual production rollouts and reducing critical release risks by 40%.
- Zero-Downtime Migrations (WCI):** Drove the modernization of business-critical microservices. Re-architected data flow from **Python/DynamoDB** to **Node.js/PostgreSQL**, ensuring 100% data consistency during live cutovers.
- Regulated Systems (WCI):** Developed core allocation APIs for the Carbon Emissions Cap-and-Trade system, implementing complex regulatory logic using strict **PostgreSQL** transactions.

Feb 2022 – Jun 2022 **Software Engineer Intern** PayPal India
Rapid Emerging Markets Team

- Built the **Interoperability Dashboard**, a tool allowing Product Managers to visualize merchant transaction failures in real-time.
- Developed REST APIs using Node.js and interactive visualizations using React, reducing time-to-debug for payment failures.

Key Projects

Live Project **Repwise | Unified TypeScript Architecture** [GitHub](#) | [Live](#)

- Built a **full-stack workout tracker** utilizing **agentic AI workflows** for architectural planning and **automated PR generation**.
- Designed a **unified TypeScript architecture** sharing types across the Supabase database and Next.js UI, managing the full SDLC and zero-downtime schema evolution.
- Maintained a strict **Kanban-tracked workflow** with **RFC-style PR documentation** to ensure architectural integrity during rapid feature iterations.
- Tech: Next.js, TypeScript, Supabase, Tailwind CSS, Vercel CI/CD.*

Full-Stack **Orion | Voice-Native AI Assistant** [Backend](#) | [Mobile](#)

- Architected an end-to-end voice-first AI assistant featuring a **React Native** client and a strictly typed **Node.js** backend.
- Engineered **low-latency API layers** for real-time LLM inference utilizing **Groq (Llama3-70B)** and integrated **Whisper** for voice transcription.
- Implemented secure **JWT-based authentication** with refresh token rotation and state persistence via **Zustand** and **AsyncStorage**.
- Tech: React Native, Node.js, PostgreSQL, Groq (Llama3), Zustand.*

Certifications

2025 AWS Certified Cloud Practitioner (Renewed) [VFDHBE51S24QKQC7](#)

2023 GCP Certified Cloud Digital Leader [5a57c6ef6a6e4d9695721b1674a3260a](#)
